IDENTIFIERS	*Arizona; Stanford Achievement Tests

ABSTRACT

This document contains reports of school district results on the Arizona Measure of Academic Progress by school and grade level for the 1999-2000 school year. Lengthy tables present results for reading and mathematics showing the change in achievement between grades each year from grades 2 to 3 to grades 7 to 8. The Arizona Measure of Academic Progress is based on percentile ranks on the Stanford Achievement Test, Ninth Edition (Stanford 9). For each school, data are provided to show the percent of expected gain and the 1999 Stanford 9 percentile rank. In many instances, data are not available for particular grade levels because too few students could be matched to prior year results. Two long tables show results for reading and mathematics for all the state's schools. (SLD)

Summary

Matching and Inclusion Criteria

The 2000 Arizona Measure of Academic Progress (MAP) was developed using the Stanford 9 Achievement Test (SAT9) scores for the period of Spring 1999 to Spring 2000. Using a combination of first name, last name, date of birth and gender, the Research and Policy Division attempted to match all students who took the SAT9 in Spring 1999 with all students who took the SAT9 in Spring 2000. On average, 87% of students were matched between the two test administrations. **The MAP is an elementary school (grades 2-8) indicator only.**

The report includes all students who meet the following criteria:

1. The student took the SAT9 in the same school in Spring 1999 and Spring 2000 or the student indicated that they started the school year at the same school they took the SAT9.
2. The student DID NOT take the SAT9 with accommodations in either year.
3. The student DID NOT retake the same level exam in Spring 1999 and Spring 2000.
4. The student has a valid score in a subject area for both years.
5. The student spelled his or her name reasonably consistently from one year to the next.

On average, 77% of matched elementary school students in 2000 are in the report.

The unit of analysis for MAP is the grade level within a school by subject area (school/grade level/subject area). There are results for the subject areas of Reading and Mathematics. In total, there are results for each unique school/grade level/subject area combination in the state that meets the following conditions:

1. More than 8 students in a grade level, are matched between Spring 1999 and Spring 2000.
2. At least 25 % of eligible students in a grade level in Spring 1999 are matched in Spring 2000.
3. The grade level has scores on record for both years.

Indicators

There has been a change to the reporting format from last year. The Star Rating and One Year's Growth indicators have been collapsed into one statistic, *The Percent of Expected Gain.*

Percent of Expected Gain – derived by dividing the amount of gain in scale score points for each school/grade level/subject area combination by the amount of national expected gain in scale score points. If the *Percent of Expected Gain* is at or above 100%, the school/grade level has achieved the proxy for at least one year of academic growth for that subject area. There are different national expected gains for each subject area and grade level combination, therefore it is not valid to compare *the Percent of Expected Gain* across subject areas or grade levels.

In addition, the MAP reports also include the *1999 Percentile Rank* for each school/grade level/subject area. The *1999 Percentile Rank* is included to approximate the starting point for each case.

If you have any questions about MAP, please contact the Research and Policy Division at (602) 542-5151.
